Status	Completed 2002

About

The development was designed specifically to provide a Call Centre, back up Data Centre and Disaster Relief Facility for ING Bank. Set over two levels the building was designed with a central circulation spine and two offset wings. The design of the building provided glazing to all sides of the building and with a narrow building depth excellent natural light and views were provided to the all occupants in the building.

At ground level there was a generous staff breakout area including a courtyard with shade sails, seating and barbecue facilities.

Ground level secure parking was designed to allow for the overlap of staff at shift change over.
